

Bright Little Eyes is a series of simple I-Pad games designed for the low vision child, or child with Cortical Vision Impairment (CVI).

Research has shown that children with CVI can have difficulty seeing things with a lot of visual clutter and often are able to see objects in a favored color such as red or yellow. We have designed apps with this in mind: simple black or white backgrounds with contrasting objects in red, yellow, or blue.

We created these apps because we realized our son really struggled to see. And not being able to see made it hard for him to learn. His vision therapist had advised us that our first goal was to get Kaiden to “use” his vision. More complex apps became something he would tap on but would struggle to look at. We have discovered that he can see best with yellow on a black background. With lots of repetition we are seeing him begin to not only “use” his vision but learn. The son we thought may never see well enough to learn is our “Bright Little Eyes”.

We hope you and your child enjoy our apps. If you have any trouble with the app or want to suggest improvements or provide feedback, we can be reached at: brightlittleeyes@gmail.com.

We invite you to check out our website, with our blog and stories of our journey: <http://www.brightlittleeyes.wordpress.com/> .
